

No	Course Information (2019-2020)	
1	Unit name:	Computer Communication
2	Code:	EcE- 41002
3	Classification:	Engineering subject
4	Credit value:	3(2-1-1)
5	Semester/ Year Offered:	1/4
6	Pre-requisite:	Communication Principles, Analog and Digital Communication
7	Mode of delivery:	Lecture, Tutorial, Practical
8	Assessment system and breakdown of marks:	
	Practical	20%
	Tutorial	10%
	Mid-term/ final Examination	70%
9	Academic staff teaching unit:	
10	Course outcome of unit: After this course, students will be able	
	1. To identify the useful concepts of data communications	
	2. To describe the principles of data communications	
	3. To apply appropriate principles and techniques to solve problems in data communications	
	4. To identify the useful concepts of computer communications	
	5. To describe the principles of computer communications	
	6. To apply appropriate principles and techniques to solve problems in computer communications	
	7. To perform modulation and multiplexing using SystemView and simulate networks using packet tracer software	
11	Synopsis of unit: The course includes types of transmission media and signal encoding techniques. This course explains the fundamental techniques common to all data link control protocols, including flow control, error control and the most commonly used protocol, HDLC. This course describes the three most common types of multiplexing techniques. The course is to apply the switching techniques by the collective behavior	

	<p>of the set of switches that make up a network. This course discusses the common routing algorithms used both in switched data networks, such as frame relay and ATM, and in the Internet. This course explains the important design issues related to cellular wireless networks. This course provides the topologies, transmission media, and MAC protocols of the most important LAN systems in current use and an overview wireless LAN technology and applications.</p>

10	<p>Course outcome of unit:</p> <p>In this course students will be able</p> <ul style="list-style-type: none"> <li>➤ To identify powerful basic concepts of modern control system</li> <li>➤ To design controllers to meet desired specifications using root locus method, frequency response method</li> <li>➤ To simulate performance of feedback control system by using MATLAB and simulation of PID control by using Simulink software</li> </ul>	
11	<p>Synopsis of unit:</p> <p>The course covers the techniques of analysis of linear control system and control design. The course introduces students to apply the root locus method. In addition, the locus of roots in the s-plane can be determined by a graphical method, the roots of the characteristics equation move around the s-plane by changing one parameter. Frequency response method, the polar plot of the frequency response of a system, stability in the frequency domain, stability considerations using Nyquist diagram, design using compensation networks and optimization, the bode diagram of a transfer function, the design of feedback control systems, and the design of state</p>	

	variable feedback systems will be learned.

3.10 Implementation Details for SPLDs, CPLDs, and FPGAs

## **Chapter 4 Optimized Implementation of Logic Functions**

4.1 Karnaugh Map

4.2 Strategy for Minimization

4.3 Minimization of Product-of-Sums Forms

4.4 Incompletely Specified Functions

4.5 Multiple-Output Circuits

4.6 Multilevel Synthesis

4.7 Analysis of Multilevel Circuits

4.8 Cubical Representation

4.9 A Tabular Method for Minimization

4.10 A Cubical Technique for Minimization

4.11 Practical Considerations

4.12 Examples of Circuits Synthesized from VHDL Code

## **Chapter 5 Number Representation and Arithmetic Circuits**

5.1 Number Representations in Digital

5.2 Addition of Unsigned Numbers

5.3 Signed Numbers

5.4 Fast

5.5 Design of Arithmetic Circuits Using CAD Tools

5.6 Multiplication

5.9 Examples of Solved Problems Problems

## **Chapter 6 Combinational-Circuit Building Blocks**

6.1 Multiplexers

6.2 Decoders

6.3 Encoders

6.4 Code Converters

6.5 Arithmetic Comparison Circuits

6.6 VHDL for Combinational Circuits

6.7 Concluding Remarks

6.8 Examples of Solved Problems

No	Course Information (2019-2020)					
1	Unit name:	Computer Science				
2	Code:	EcE-41024				
3	Classification:	Engineering subject				
4	Credit value:	3(2-0-2)				
5	Semester/ Year Offered:	1/4				
6	Pre-requisite:	NA				
7	Mode of delivery:	Lecture, Tutorial, Practical				
8	Assessment system and breakdown of marks:	Practical, Tutorial				
	Practical	20%				
	Tutorial	10%				
	Mid-term/ final Examination	70%				
9	Academic staff teaching unit:	Department of Electronic Engineering				
10	<p>Course outcome of unit:</p> <p>After this course, students will be able</p> <p>CO1. To explain the structure of the computer system.</p> <p>CO2. To write the programs using decision making and looping statements, functions, arrays, strings, pointers and file with C programming languages</p> <p>CO3. To write the C programs using simple class, arrays, overloading operators, drives class, pointers, friend functions and file in OOP programming languages</p> <p>CO4. To write the C programs using Turbo C++ software</p>					
	<p>Synopsis of unit:</p> <p>The course introduces students to the study of computer system and programming language. Course covers the various structures and statements in the programming language. The course is designed to familiarize the student with C programming language. Computer Science is a comprehensive course in electrical engineering and can be applied in the field of industrial control, communication and any other various applications.</p>

NO	Course Information (2019-2020)	
1	Unit name	Industrial Electronics and Control I
2	Code	EcE-41031
3	Classification:	Engineering Subject
4	Credit value	3 (2-0-2)
5	Semester/ Year Offered	1/4
6	Pre-requisite:	Fundamental of Electronic Circuits, Electronic Engineering Circuits, Microelectronics, Integrated Electronics
7	Method of Delivery	Lecture, Discussion, demonstration
8	Assessment System and Breakdown of Marks:	Tutorial, Assignment, Lab report
	Tutorial and Assignment	10%
	Lab Report	20%
	Mid-term Examination	70%
9	Academic Staff: teaching unit:	Department of Electronic Engineering
10	<p>Course outcome of unit:</p> <p>After completion of this course, students will be able to:</p> <ol style="list-style-type: none"> <li>1. describe basic operation and compare performance of various semiconductor devices, passive components and switching circuits</li> <li>2. determine the power circuit configuration needed to fulfill the required power conversion with applicable constraints</li> <li>3. design and analyze power converter circuits by selecting the appropriate power semiconductor devices for the required application</li> <li>4. design the control circuits and power circuits for a given power converter for the required application</li> <li>5. perform the basic electronics troubleshooting by using tools/test equipment to analyze electronic components</li> <li>6. develop skills to build and troubleshoot power electronics circuits</li> </ol>	
	<p>Synopsis of unit:</p> <p>The course covers the power electronics devices with their operation and applications. The course introduces to the students to the types of Thyristor, SCR, its terminology, turning ON and OFF of SCR, triggering SCR, forced commutation methods, characteristic and SCR operation, line commutation methods, Triacs, Diacs, Quadracs, Power diodes, Power transistor, Power MOSFET, IGBT, unijunction transistor. And heating and welding control, induction heating, dielectric heating and welding. And the next introduces to the students to the types of inverters, dual converters, choppers, cycloconverters, and motor control methods.</p>	

5. **Thyristors**

- 5.1 Introduction
- 5.2 **Silicon Controlled Rectifier**
  - 5.2.1 Constructional features
  - 5.2.2 Theory of operation of SCR with two transistor analogy
  - 5.2.3 Physical operation of SCR
- 5.3 SCR Terminology
  - 5.3.1 Forward breakover voltage or forward breakdown voltage
  - 5.3.2 Reverse breakdown voltage
  - 5.3.3 ON – state voltage
  - 5.3.4 Finger voltage
  - 5.3.5 Average ON – state current
  - 5.3.6 Holding current
  - 5.3.7 Latching current
  - 5.3.8 Forward current rating
  - 5.3.9 Gate triggering current
  - 5.3.11 Turn – on time
  - 5.3.12 Turn – off time
- 5.4 Different Methods of **Turning on** of SCRs
  - 5.4.1 Radiation triggering or light turn – on
  - 5.4.2 Voltage triggering or breakover voltage turn – on
  - 5.4.3  $dv/dt$  turn – on
  - 5.4.4 Gate turn – on or gate triggering
- 5.5 Different Methods **of Turning off** of SCRs
  - 5.5.1 Natural commutation
  - 5.5.2 Forced commutation
  - 5.5.3 Gate turn – off
- 5.6 Different Methods of **Triggering** SCR Circuits
  - 5.6.1 Pulse control by R – C network
  - 5.6.2 Pulse triggering by saturable reactor
  - 5.6.3 Composite triggering by PWM controller
  - 5.6.4 Pulse triggering by discrete transistors
- 5.7 Different methods of **Forced Commutation**
  - 5.7.1 Class A commutation (Series resonant commutation by an LC circuit)
  - 5.7.2 Class B commutation (Parallel resonant commutation by an LC circuit)
  - 5.7.3 Class C commutation (Complementary commutation or parallel capacitor turn – off)
  - 5.7.4 Class D commutation (Auxiliary commutation)
  - 5.7.5 Class E commutation (External pulse commutation)
  - 5.7.6 Class F commutation (AC line commutation)
- 5.8 Comparison of SCRs and Transistors
- 5.9 Thermal Characteristics of SCRs
- 5.10 Causes of Damage to SCR
  - 5.10.1 Preventing damage to SCRs
- 5.11 The SCR Crower or Overvoltage Protection Circuit
- 5.12 Series and Parallel Operation of SCRs
  - 5.12.1 Series connected SCRs
  - 5.12.2 Triggering of series connected SCRs
  - 5.12.3 Parallel connection SCRs
  - 5.12.4 Triggering of parallel connected SCRs
- 5.13 **Line – commutated** Converters or Rectifier Circuits

- 5.13.1 Half – wave rectifier (inductive load)
- 5.13.2 Half – wave rectifier (resistive load)
- 5.13.3 Full – wave control circuit
- 5.13.4 Single – phase full – wave controlled rectifier using center – tap transformer (M – 2 connection)
- 5.13.5 Single – phase bridge rectifier
- 5.13.6 Single – phase full – wave full – controlled bridge rectifier (B – 2 connection)
- 5.13.7 Single – phase full – wave half – controlled bridge rectifier (B – 2 connection)
- 5.13.8 Three – phase full – wave rectifier (M – 6 connection or six – pulse double – star circuit)
- 5.13.9 Three – phase full – wave full – controlled bridge rectifier (B – 6 connection)
- 5.13.10 Three – phase full – wave half – controlled bridge rectifier (B – 6 connection)
- 5.13.11 Three – phase half – wave diode rectifier with resistive load
- 5.13.12 Differences between full – controlled bridge and half – controlled bridge rectifiers

5.14 **TRIACS**

- 5.14.1 Gate triggering modes of the Triac
- 5.14.2 Choice between triacs and SCRs
- 5.14.3 Comparison of triacs with antiparallel SCRs

5.15 **DIACS**

5.16 **QUADRACS**

5.17 Recovery Characteristic

5.18 First Recovery Diodes

5.19 **Power Diodes**

- 5.19.1 Current ratings of power diodes
- 5.19.2 Voltage rating of power diodes
- 5.19.3 Protection of the power diode (Snubber circuit)

5.20 **Power Transistors or Power BJTs**

- 5.20.1 Snubber circuit (Switching – aid circuit) of the power BJT
- 5.20.2 Switching characteristic of the power transistor

5.21 **Power MOSFETS**

- 5.21.1 Snubber circuit (Switching – aid circuit) of the power MOSFET
- 5.21.2 Switching characteristics of the power MOSFET

5.22 **Insulated Gate Bipolar Transistor (IGBT)**

5.23 Loss of Power in Semiconductor Devices

5.24 Comparison between Power MOSFET, Power Transistor, and Power IGBT

5.25 **Unijunction Transistor**

5.26 Electron Tubes

- 5.26.1 Gas – filled diode
- 5.26.2 Thyratrons
- 5.26.3 Ignitron (Mercury – pool tube)

**6**

**Inverters, Dual Converters, Choppers and Cycloconverters**

6.1 **Inverters**

6.2 Line – commutated Inverters

- 6.2.1 Single – phase line – commutated full – controlled inverter
- 6.2.2 Three – phase line – commutated full – controlled inverter or six – pulse converter

- 6.3 Forced – commutated Inverters
  - 6.3.1 Single – phase parallel – capacitor commutated inverter (Resistive load)
  - 6.3.2 Single – phase parallel – inverter with feedback diodes
  - 6.3.3 Single – phase series inverter
- 6.4 Voltage – source Inverter
- 6.5 Current – source Inverter
  - 6.5.1 Differences between voltage – source and current – source inverters
- 6.6 Three – phase Forced – commutated Bridge Inverters
- 6.8 **Dual Converters**
  - 6.8.1 The phase – controlled dual converter
  - 6.8.2 Single – phase dual converter
  - 6.8.3 Types of three – phase dual converters
  - 6.8.4 Circulating current type dual converter (Mid – point configuration)
  - 6.8.5 Circulating current type dual converter (Dual – bridge configuration)
  - 6.8.6 The circulating current – free type or non – circulating type dual converter
  - 6.8.7 Different configurations used for dual converters
- 6.9 **Choppers**
  - 6.9.1 Principle of operation
  - 6.9.2 Chopper control technique
  - 6.9.3 Voltage step – down chopper
  - 6.9.4 Voltage step – up chopper
  - 6.9.5 Jones chopper
  - 6.9.6 Two – quadrant chopper or reversible chopper
  - 6.9.7 AC chopper
- 6.10 **Cycloconverters**
  - 6.10.1 Types of cycloconverters
  - 6.10.2 Single–phase/single–phase cycloconverter (Mid–point configuration)
  - 6.10.3 Single–phase/single–phase cycloconverter (Bridge configuration)
  - 6.10.4 Three – phase/single – phase cycloconverter
  - 6.10.5 Types of three – phase/single – phase cycloconverters
  - 6.10.6 Three – phase/single – phase cycloconverter (Circulating current type)
  - 6.10.7 Three–phase/single–phase cycloconverter (Non – circulating current type)
  - 6.10.8 Three – phase/three – phase cycloconverter

## 8

### Heating and Welding Control

- 8.1 Introduction
  - 8.1.1 Advantages of electrical heating
- 8.2 **Induction Heating**
  - 8.2.1 Theory of induction heating
  - 8.2.2 Principle of induction heating
  - 8.2.3 Effects of supply frequency on induction heating
  - 8.2.4 Effects of source voltage on induction heating
  - 8.2.5 Choice of frequency for induction heating
  - 8.2.6 Advantages of induction heating
  - 8.2.7 Application of induction heating

	<p>8.2.8 Surface hardening of steel or surface heating of a small cylindrical rod</p> <p>8.2.9 Source of high frequency power supply for induction heating</p> <p>8.3 <b>Dielectric Heating</b></p> <p>8.3.1 Electronic theory of dielectric heating</p> <p>8.3.2 Principle of operation of dielectric heating</p> <p>8.3.3 Dielectric heating in materials of irregular shapes</p> <p>8.3.4 Limitations of the use of extremely high frequency for dielectric heating</p> <p>8.3.5 Effect of vibration of voltage of the power supply on dielectric heating</p> <p>8.3.6 Effect of vibration of frequency of the power supply on dielectric heating</p> <p>8.3.7 Applications of dielectric heating</p> <p>8.3.8 Source of high frequency power supply for dielectric heating</p> <p>8.3.9 Differences between induction heating and dielectric heating</p> <p>8.4 <b>Welding</b></p> <p>8.4.1 Theory of resistance welding</p> <p>8.4.2 Classification of resistance welding</p> <p>8.5 Scheme for AC Resistance Welding</p> <p>8.6 Ignitron Contractor as Electronic Line Contractor</p> <p>8.6.1 Heat control by the change of firing angles in ignitrons</p> <p>8.6.2 Complete control in resistance welding by a sequence timer</p>
