

Course Structure

No	Information of Engineering Materials I (2019-2020)	
1	Unit name:	Engineering Materials I
2	Code:	Met- 21071
3	Classification:	Engineering subject
4	Credit value:	2.5
5	Semester/ Year Offered:	1/2
6	Pre-requisite:	
7	Mode of delivery:	Lecture, Tutorial, Assignment
8	Assessment system and breakdown of marks:	
	Test	30%
	Mid-term/ final Examination	70%
9	Academic staff teaching unit:	1
10	<p>Course outcome of unit:</p> <p>In this course, students will be able to</p> <ul style="list-style-type: none"> <li>- explain main type of engineering materials (Metals, Ceramics, Polymer, Semiconductor and Composite)</li> <li>- explain Atomic Bonding (Metallic bonds, Covalent bond, Ionic bond and Vander Waals bonds)</li> <li>- explain and apply Lattice, Basis, Units Cells and Crystal Structures to calculate the problems.</li> </ul>	
11	<p>Synopsis of unit:</p> <p>The course describes Simple cubic, Body-centered cubic, Face-centered cubic and Hexagonal Close-Packed structure diagrams. Type of diffusion problems (Fick's first Law and Fick's second Law).</p>	

Course Structure

12	<p>Topic:</p> <p><b>Chapter 1</b>            Classification of Materials            Classification of Materials Based on Structure            Environmental and Other Effects            Materials Design and Selection</p> <p><b>Chapter 2</b>            The structure of the atoms            Atomic Bonding            Binding Energy and Inter atomic spacing</p> <p><b>Chapter 3</b>            Lattice, Basis, unit Cells and Crystal Structures            Points, Direction and Plane in the Unit Cell            Crystal Structures of Ionic Materials</p> <p><b>Chapter 4</b>            Point Defects            Other point Defect            Dislocations            Schmid'law</p> <p><b>Chapter 5</b>            Application of Diffusion            Rate of Diffusion            Mechanisms for Diffusion            Applications of Diffusion            Applications to Polymers</p>
